# JAVELIN ADDS SOLIDSCAPE CAPABILITIES

Javelin 3D now offers design components built on the **Solidscape** system. **Solidscape** RP patterns are excellent for projects requiring precision parts with fine surface features. Offering build layers that range from 0.0005 in. (0.013 mm) to 0.003 in. (0.076 mm), the **Solidscape** system also provides some of the highest detail available for rapid prototyping systems. A surface finish of 32-63 micro-inches (RMS) is available along with a minimum feature size of 0.010 in. (0.254 mm). The standard build envelope is: X = 6 in. (15.24 cm), Y = 6 in. (15.24 cm), Z = 6 in. (15.24 cm).

Solidscape System

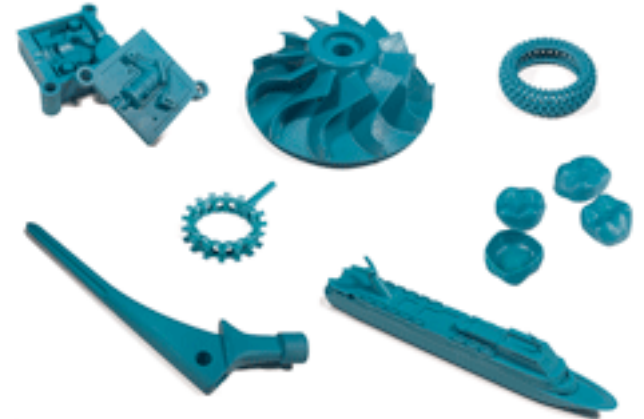

The material of **Solidscape** parts is optimized for burnout for investment casting. It's a non-toxic thermoplastic that is easily sealed and painted. Parts outside the built envelope can be built in sections and joined together.

Solidscape Rapid Prototypes

**Higher Temperature Casting Resin Now Available!**

**Javelin now offers an amazing 340F (HDT) high-temperature polyurethane for soft-tooling castings.**

This rigid 84 Shore D urethane casting system maintains structural integrity at 340F. Call today for a quote on your next short run production order.
